W-1000
W-2000A
Handsfree Doorboxes

August 1, 2001

Answer Your Door or Gate From Any Phone in Your Home or Office

W-1000

Now you can answer your door or gate from the safety of your telephone!

The **W-1000** (flush mount) and **W-2000A** (surface mount) doorboxes are designed to be installed on the unused telephone line input of nearly any phone system. One or two doorboxes can also share an existing residential phone line when used in combination with a **C-1000A** doorbox controller.

When the **Push To Call** button is pressed, the doorbox generates a standard ring cadence for an adjustable number of rings. To converse with the visitor, the inside party simply answers the call from the phone of their choice.

W-2000A

Phone...715.386.8861

Features

- **W-1000:** Vandal resistant, black powder painted, aluminum faceplate with heavy duty call button and mounting gaskets
- **W-2000A:** Ash colored, impact resistant, UV stable, plastic chassis
- 24 volt talk battery
- 20 Hz ring generator (3.0 REN)
- Handsfree VOX operation
- Adjustable maximum number of rings (1 to approximately 7)
- Microphone volume adjustment
- Compact 45° terminal strip for easy wiring
- Optional surface mount box (**VE-5x5**) available for the **W-1000**

info@vikingelectronics.com

Applications

- Commercial, industrial and residential door security
- Door or gate communication
- Use with the **C-1000A** controller for single line residential systems or when the operation of door strikes or gate openers is necessary

Made in the U.S.A.

Specifications

Power: 120V AC/13.8V AC 1.25A UL listed adapter provided
Dimensions: **W-1000** - Overall - 127 x 127 x 57 mm (5.0 x 5.0 x 2.25"), Plastic Electrical Box - 102 x 102 x 57mm (4 x 4 x 2.25"), **W-2000A** - 140 x 115 x 38mm (5.5" x 4.5" x 1.5").
Shipping Weight: **W-1000** - 1.36 kg (3 lbs), **W-2000A** - .75 kg (1.5 lbs)
Connections: (4) position screw terminal strip
Ringer Output: 3.0 REN, 20Hz
Ring Cadence: 1 second ON, 3.5 seconds OFF
Maximum Loop Length: 1.9 Km (6300 ft) - 24 AWG twisted pair
Maximum Power Run: 45.7 m (150 ft) - 24 AWG twisted pair

Installation

Important: Do NOT install a W-1000 or a W-2000A on a telephone line without a C-1000A (Fax Back Document 155).

A. Mounting the W-1000

Caution: When warm air comes in contact with cold surfaces, such as outside walls and conduits, it causes condensation. To prevent condensation and moisture from accumulating inside the W-1000 always bring conduit into the bottom of the unit. Otherwise drill a 1/4" diameter hole in the bottom of the gray plastic box for drainage.

Note: The W-1000 will NOT mount to a standard double gang box.

Note: When using the large foam gasket (flush mounting), peel off the paper liner and adhere gasket to the back of the faceplate, centering over the four corner mounting holes.

B. Mounting the W-2000A

C. Wiring the W-1000 or the W-2000A

Note: Retrieve Fax Back Document 155 for residential installation information on the C-1000A.

Programming

A. Adjusting the Maximum Number of Rings

The W-1000/2000A can be adjusted to output a ring signal from 1 to approximately 7 rings. Turn the "RING ADJ" potentiometer clockwise to increase the maximum number of rings as shown above.

Note: Test the unit after each potentiometer adjustment to determine if the desired number of rings was achieved.

B. Adjusting the Microphone Volume

In certain noisy locations (background traffic, machinery or wind), the microphone volume may need to be decreased. A symptom of this is one-way talk path, in which the distant party cannot be heard over the speaker. A "MIC VOL" adjustment is provided on the W-1000/2000A for increasing or decreasing the microphone sensitivity.

Notes: If the microphone volume is set too high or too low, one-way talk path may occur. For extremely noisy environments, use the W-3000 (Fax Back Document 180).
